

EmbryoOne Web Style Guide

AI Web-Building Agent Handoff Specification · Version 2.0

Core direction: EmbryoOne purple brand identity, drawn directly from our logo mark, layered onto a warm, spacious, Lovable-inspired product surface.

Typeface: DM Sans across the entire experience — marketing and product UI alike.

Hard rule: No blue anywhere in the interface. Every blue-coded role (links, info states, focus rings, charts) is replaced by a violet-family color defined in this guide.

ZERO BLUE · DM SANS · PURPLE-FIRST

Brand Colors

The palette below is sourced from three places: the EmbryoOne logo mark itself, our approved brand palette, and Lovable.dev's warm, restrained product surface. Purple is the recognizable identity color — it should read as intentional and confident, not decorative.

Primary — from the EmbryoOne logo

			
Embryo Purple #CB6CE6 Primary brand / CTA	Amethyst #9A4DC1 Logo wordmark / links	Ink Violet #181330 Primary dark / headings	Ink Violet Deep #120C1F Deepest text / dark UI

Secondary & Accent — logo bloom + palette

				
Vivid Orchid #C759E1 Secondary brand accent	Lavender Purple #AD52D0 Hover / pressed state	Lavender Purple 2 #A35AC8 Active state / selected	Violet #DB97F5 Soft highlight / chips	Iris #5B3AC4 Blue replacement (info)
				
Twilight #3B2166 Deep accent / dark mode	Lavender Blush #F3E6FB Soft brand surface			

Why these exact shades: Amethyst, Vivid Orchid, Lavender Purple, Lavender Purple 2 and Violet are lifted directly from the color analysis run on the EmbryoOne logo mark, so the site will read as unmistakably "on-brand" rather than a generic purple recolor.

Neutral & Functional Colors

Neutrals borrow Lovable.dev's warm, restrained surface language — a soft parchment background and hairline borders — instead of stark white-and-grey. Functional colors cover system states without ever touching blue.

Neutral — Lovable-inspired warm surfaces

Pure White
#FFFFFF
Card / primary surface

Warm Parchment
#F7F4ED
Page / section surface

Parchment Border
#ECEAE4
Hairline structural border

Mist Lilac
#E4DFEA
Input border / divider

Dove Grey
#5C5566
Secondary / body text

Steel Mauve
#888494
Disabled / tertiary text

Functional — system states

Alert Red
#E54840
Error / destructive

Confirm Green
#2F9E68
Success / confirmation

Caution Amber
#E2A63D
Warning / caution

Iris
#5B3AC4
Info (blue replacement)

Usage weight (target distribution)

COLOR	WEIGHT	COLOR	WEIGHT
Pure White	36%	Warm Parchment	10%
Embryo Purple	14%	Ink Violet / Ink Violet Deep	13%
Dove Grey	7%	Lavender Blush / Mist Lilac	9%
Amethyst / Vivid Orchid / Lavender Purple	6%	Iris / Twilight	3%
Steel Mauve	1%	Alert Red / Confirm Green / Caution Amber	1% each

DM Sans

DM Sans is the single typeface across marketing and product surfaces — a low-contrast, geometric grotesk that reads clean and confident at both display and UI sizes. Load weights 400 (Regular), 500 (Medium), 600 (SemiBold via variable axis) and 700 (Bold).

Font stack: font-family: 'DM Sans', 'Inter', ui-sans-serif, system-ui, sans-serif; self-host DMSans-Variable.ttf . Import from Google Fonts (weights 400–700, variable) or

Type scale

DISPLAY XL / 64	Grow with clarity
H1 / 48	Page title heading
H2 / 36	Major section heading
H3 / 28	Card / subsection heading
H4 / 22	Small heading, labels
BODY LARGE / 18	Intro copy sits comfortably at this size, used for lead paragraphs.
BODY / 16	Default body copy for paragraphs, descriptions and general UI text.
BODY SMALL / 14	Secondary copy, helper text, form hints.
CAPTION / 12	METADATA, TIMESTAMPS, TAGS
BUTTON / 14	Button label
METRIC / 48	128%

Reference table

STYLE	SIZE	LINE HEIGHT	WEIGHT	TRACKING	USAGE
Display XL	64	1.00	700	-2.5px	Hero only
Display	56	1.05	700	-2.0px	Large hero

Button	14	20	700	0	Controls
Nav	15	24	500	0	Navigation
Metric	48	1.10	600	-1.44px	KPIs

Component Rules

Component treatments follow the Lovable-inspired product pattern: white cards on a warm parchment canvas, hairline borders, restrained shadow, and one confident purple accent per screen.

Buttons

Primary Button

Secondary Button

Info / Accent Button

Outline Button

COMPONENT	KEY SPECIFICATION
Primary button	Background #CB6CE6, white text, 40–44px high, 10px radius, hover → #AD52D0, active → #A35AC8, 14/20/700 label
Secondary button	#F3E6FB background, #3B2166 text, 1px #E4DFEA border, hover background #E4DFEA
Info / accent button	#5B3AC4 background (blue replacement), white text — used for links-as-buttons and informational CTAs
Input	40–44px high, 8–10px radius, #E4DFEA border, focus ring #CB6CE6 at 30% opacity (never blue)
Card	White fill, 16px radius, 24px padding, subtle shadow, sits on #F7F4ED page surface
Header	64px desktop, 60–64px mobile, white or parchment background, hairline bottom border
Sidebar	240–264px desktop, 40–44px item height, active item uses Lavender Blush background + Embryo Purple text
Table row	48–56px, 16px horizontal padding, hairline #ECEAE4 row divider
Modal	20px radius, 16–48px shadow, parchment scrim overlay
Pill / badge	999px radius; success #2F9E68, warning #E2A63D, error #E54840, info #5B3AC4

Radius system

Shadow system

Spacing, Layout & Motion

Spacing & layout

- Base spacing: 8px rhythm — tokens
4/8/12/16/20/24/32/40/48/64/80/96/128
 - Desktop container: 1200–1280px; large desktop 1280–1400px
 - Side padding: 32px desktop, 24px tablet, 16–20px mobile
 - Section spacing: 80–96px typical; major sections 112–128px
- Breakpoints: <640 mobile, 640–1023 tablet, 1024–1279 desktop, ≥1280 large desktop
 - Marketing hero: 96–128px vertical padding, 48–64px H1, 720–820px max text width
 - Application shell: warm-parchment canvas + white cards + ink-violet text + purple active states

Motion

Restrained motion only. Preferred easing: `cubic-bezier(0.16, 1, 0.3, 1)`. Avoid bouncing, excessive rotation, constant floating, and distracting parallax.

INTERACTION TYPE	DURATION
Micro interactions (icon, toggle)	120–180ms
Controls (buttons, inputs)	180–250ms
Cards / navigation	200–300ms
Major reveals (modals, page transitions)	400–700ms

Sample section composition

Marketing section

Warm Parchment background, white card insets, Embryo Purple CTA, Ink Violet headline, Dove Grey supporting copy.

Product screen

Pure White canvas, Mist Lilac hairline dividers, Lavender Blush selected states, Iris for informational callouts.

AI Transformation Checklist

Give this document plus a target URL to any AI web-building agent. The agent should restyle the existing site end-to-end against this spec while preserving its content and functionality.

- Inspect the existing website and preserve its useful content and functionality.
- Replace all existing design tokens (colors, fonts, radii, shadows) with the EmbryoOne tokens on the following page.
- Remove blue everywhere — buttons, links, charts, badges, focus states, illustrations, gradients, favicons. Replace with Embryo Purple, Amethyst, or Iris depending on role.
- Use Embryo Purple (#CB6CE6) as the primary, most recognizable brand color; Amethyst (#9A4DC1) for wordmark-adjacent and link moments.
- Use Ink Violet / Ink Violet Deep for strong typography and dark surfaces, never pure black.
- Use Warm Parchment (#F7F4ED) and Lavender Blush for calm section separation, in place of stark white or grey backgrounds.
- Use Iris (#5B3AC4) as the direct replacement anywhere blue previously carried an informational or link role.
- Switch the entire site's typeface to DM Sans and apply the documented type scale.
- Apply the 8px spacing rhythm and the 8/12/16/20/24px radius system to every element.
- Use hairline borders (#ECEAE4 / #E4DFEA) and the three documented shadow levels rather than heavy elevation.
- Apply Confirm Green, Caution Amber and Alert Red consistently to success, warning and error states — never repurpose blue for any of them.
- Check all hover, active, focus, disabled, loading, empty, success, warning and error states against the new palette.
- Check the result on desktop, tablet and mobile breakpoints.
- Perform a final visual scan of every page and component to confirm no blue remains anywhere in the interface.

Acceptance criterion: the result should look like EmbryoOne, not the original site with a purple recolor. Purple should feel intentional and recognizable — sourced from our logo — while whitespace, typography, hierarchy and usability stay clean and Lovable-calm.

Core CSS Tokens

Drop these custom properties directly into the target site's root stylesheet. Every color, radius and shadow used elsewhere in this guide is defined here — nothing else should be introduced.
